# Ferguson Ariva S300. Description and configuration of EMM blocker.

## 1. How to enter blocker Menu?

Menu►Tools►CAS

## 2. EMMs` description and funkctions

- EMM-G: If this parameter is OFF, it means that blocker will block all EMMs destined to ALL Operators cards.
- EMM-S: : If this parameter is OFF, it means that blocker will block all EMMs destined to the GROUP of cards that the card in use belongs to. Update expire date of tiers, EMMs directed to different groups of cards.
- EMM-U: If this parameter is OFF, it means that blocker will block all EMMs destined to the used card and only that one.

## 3. Default settings

- EMM-G = ON, all EMM-G go through
- EMM-S = ON, all EMM-S go through
- EMM-U = ON, all EMM-U go through

## 4. Examples/In work

- I`ve got an official card paid every month and I`d like to watch all channels that I have the right to.

**EMM-G= ON / EMM-S=OFF / EMM-U= OFF**

In this situation Ferguson Ariva S300 card reader behaves itself like it was official.

- I`ve got a card and I want it to update just keys and date of tiers. I don`t want to risk loosing my card.

**EMM-G= ON / EMM-S= OFF / EMM-U= OFF**

- I`ve got a card and I`m afraid to block all EMMs:

**EMM-G=ON / EMM-S= OFF / EMM-U= OFF**

**ATTENTION!!!** In this case the setup of active blocker is redundant, because it is a filter above EMM-G and these, being OFF, don`t let anything go through, so it doesn`t have anything to filter.
